synapse themes

THANK YOU FOR YOUR PURCHASE!

We are thrilled to bring joy to another forum owner with a brand-new theme!

Two years ago, we were commissioned to recreate a forum theme that had gained popularity among other forums. A customer admired it so much that they asked us to rebuild it specifically for their use—and we delivered! This theme required extensive work, as we reconstructed it entirely from scratch.

You've acquired the lite version of this theme, but we also offer a premium version. The lite version was designed with inclusivity in mind:

- **Affordability:** We aim to bridge the gap between those who can afford premium products and those who cannot.
- **Ease of Use:** The lite version is fully functional without the need for third-party add-ons.
- **Customization-Friendly:** Modifying the theme is straightforward when following the guidance in this document.

If you choose not to customize the theme further, that's completely okay—you're all set to use it as is.

Thank you for choosing Synapse-Themes!

Warm regards,
The Synapse-Themes Team

To customize or add new footer links, follow these steps:

Go to: AdminCP → Appearance → Styles → Kingz V3 Lite - Child → Templates → PAGE_CONTAINER

Scroll down to line 576 to locate the footer section.

To modify a link or text, edit the content at line **576**.

PAGE_CONTAINER

```
<li>
  <a href="#">Link</a>
</li>
```

```
<li>
  <a href="/support">Support</a>
</li>
```

Additionally, you can update the section headings at line **607**.

PAGE_CONTAINER

```
<li>
  Community
</li>
```

```
<li>
  Partners
</li>
```

In the same `PAGE_CONTAINER` template, navigate to line **586**.

PAGE_CONTAINER

```
<a
  class="emudevs__footer-social-link"
  href="#"
  target="_blank"
  data-xf-init="tooltip"
  title="Discord"
>
  <svg>
    <path>....</path>
  </svg>
</a>;
```

```
<a
  class="emudevs__footer-social-link"
  href="https://t.me/synapse"
  target="_blank"
  data-xf-init="tooltip"
  title="Telegram"
>
  <svg>
    <path>....</path>
  </svg>
</a>;
```

Here's what to do next:

- The code is almost identical to the previous section, except the title has been updated to "Telegram." The title defines the tooltip text that appears when you hover over the icon.
- Update the **`href=""`** attribute to include your desired link.

- For the <svg></svg> element, you'll need to fetch a new icon.

Here's how:

1. Visit **Iconify**.
2. Use the search bar in the top-right corner to find "Telegram."
3. Select your desired icon and adjust the size to 20px with a color of white (#FFF).
4. Copy the SVG code from the popup window, then paste it into the `PAGE_CONTAINER` template to replace the existing icon.

Repeat these steps to update other links and icons as needed.

In KINGZ V3 - Lite, the Node icons are hardcoded and depend on the Node Title. To change these icons, follow a similar approach as with the Footer Icons:

1. Navigate to the template list and locate the template named **node_list_category**.
2. Go to **line 11**.

Here, you'll notice the icons are conditionally assigned based on the Node Title chosen for your category.

node_list_category

```
<xf:if is="$node.title == 'Main category'">
  <svg>
    <path>...</path>
  </svg>
  <xf:elseif is="$node.title == 'Marketplace'" />
  <svg>
    <path>...</path>
  </svg>
  <xf:else />
</xf:if>
```

node_list_category

```
<xf:elseif is="$node.title == 'Marketplace'" />
  <svg>
    <path>...</path>
  </svg>
  <xf:elseif is="$node.title == 'Gaming'" />
  <svg>
    <path>...</path>
  </svg>
```

For example, if you add a new category titled Gaming, you'll need to:

- Add a new <xf:elseif> statement after the existing one for Marketplace.

This allows you to define the specific icon for the Gaming category, similar to the existing examples in the template.
